

Relationship Determination Document

1. Objective

The objective of this document is to define the methodology for identifying, establishing, verifying, validating and maintaining direct relationships between the members of a Jan Aadhaar Family Card record available in the citizens 360-degree profile database of SMART and multiple departmental repositories.

2. Scope

This document defines the approach for determining and validating family relationships among Jan Aadhaar Family Members by using the 360-Degree Citizen Profiles Repository as the primary source and integrating information from trusted secondary data sources, such as Birth Registration, Death Registration, Marriage Registration, RBSE Students Registration Record, Shaladarpan Students Registration Record, Social Welfare Schemes, RGHS Database, Family Ration Card Records, and other upcoming authorized government databases.

It covers the identification and validation of relationships including Mother, Father, Spouse, Son, Daughter, Grandson and Granddaughter etc through predefined business rules, data matching techniques, source prioritization, and cross-validation mechanisms.

The document also outlines the process for handling relationship updates due to birth, marriage, death, or changes in family composition, ensuring the creation and maintenance of an accurate, consistent, and trusted citizen-family relationship repository for government service delivery.

3. Data Sources

Priority	Source System	Purpose
